+ FOR A PERFECT LIFE

Nutrition plays a key role in the lives of our companion animals. It profoundly affects not only our physical condition but our mental well-being as well. A complete dry food typically represents some 80-100% of a dog's and cat's daily intake of nutrients. It is therefore crucial to choose a diet that will best cover the specific nutritional needs of your pet. NutriCan diets are designed by Canvit's experts based on many years' experience in the production of diets and vitamin preparations. The composition of NutriCan foods have been developed with the goal of providing maximum long-term health and fitness benefits for your dog and cat.

HIGHLY DIGESTIBLE CHICKEN, NOT SUBSTITUTES

Nutrican feeds are produced entirely from highly digestible sources of protein: dried chicken muscle and viscera; dried chicken meat meal; and enriched with chicken liver for a great taste.

COLD-PRESSED HERRING OIL

The food contains chicken fat with the addition of high-quality cold-pressed herring oil rich in DHA, EPA, and omega-3 fatty acids. These play an irreplaceable role in promoting the health of the nervous and vascular systems, and ensure top coat quality.

ALGAE, BROWN SEAWEED

Nutrican is enriched with Algae, which is a genus of freshwater blue-green seaweed. Algae is an excellent source of prebiotics, minerals, and enzymes. Furthermore, Algae has strong anti-inflammatory effects and it supports the immune modulation of the intestinal micro flora.

CHONDROPROTECTIVE AGENTS ARE ESSENTIAL

Problems with movement and the musculoskeletal system are typical manifestations of the modern era, and companion animals are no exception. We believe that proper prevention with a diet containing chondroprotective agents can effectively forestall undesirable bone, joint and tendon disorders.
